Sask 1st Call (Call Before You Dig)	- 1-866-828-4888

Water and Electricity don't Mix!!

Things to consider while flood waters are rising!

- Disconnect all out door electrical devices - extension cords, yard lights, receptacles, air conditioners, appliances, power to sheds etc that are in danger of being submerged.
- If water is entering your basement disconnect all equipment and receptacles in the basement by unplugging appliances and turning off the breakers, **ONLY** if this can be done in a **safe manner**.
- If the water is entering the basement and you are unable to get to the breakers call SaskPower to disconnect the power.
- When using pumps, lights and tools in the vicinity of the water, a **Ground Fault Circuit Interrupter** must be used (such as the **GFCI bathroom receptacle, GFCI outside receptacles or GFCI extension cords**)
- When using portable generators do not connect to the house circuits! This can cause a dangerous back feed situation. Use for specific tools only such as lights and pumps. Do not run generators indoors or in confined spaces. Keep all cords and generators safely out of the water.
